Year & Dep : 4th year & IT
Batch : 2024
Zone no : Zone 8

1. Create a Master-Detail Relationship between two Custom objects and also create a Roll Up Summary Field to Calculate total number of records.

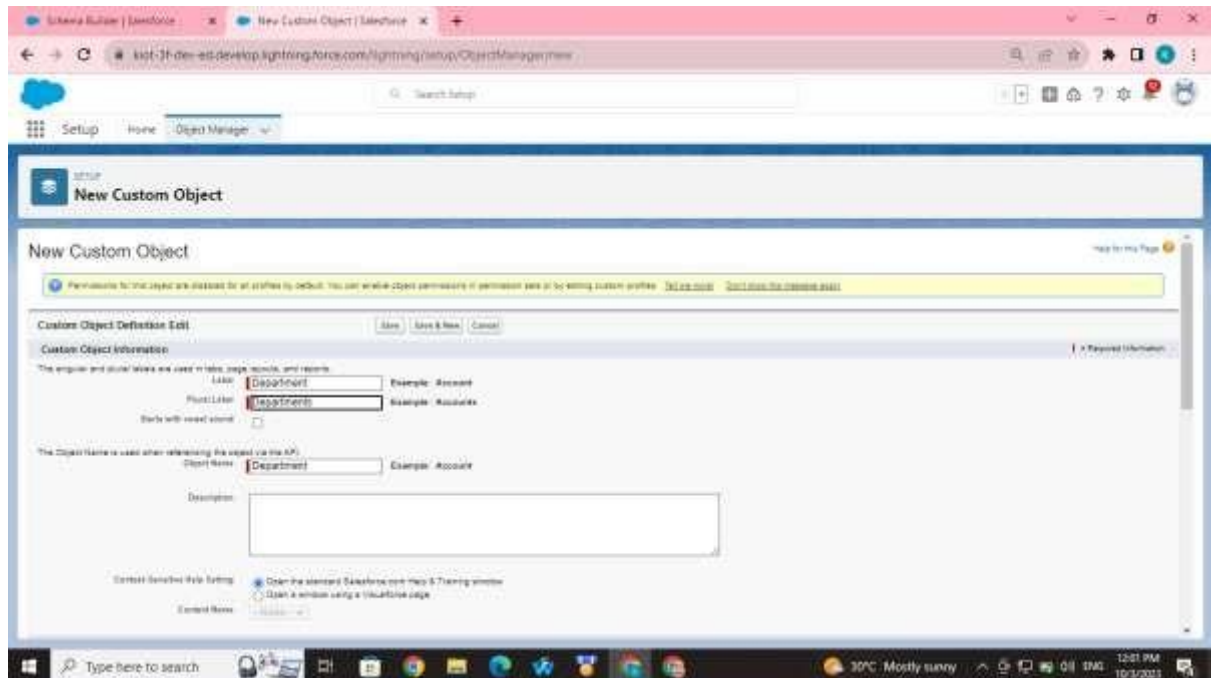

Solution:

Step 1: Create Custom Objects

Assuming you have two custom objects, let's call them "College" and "Department". If you haven't already created these objects, you can do so by going to Setup > Object Manager > Create > Custom Object.

Second custom objects, let's call them
"Department"

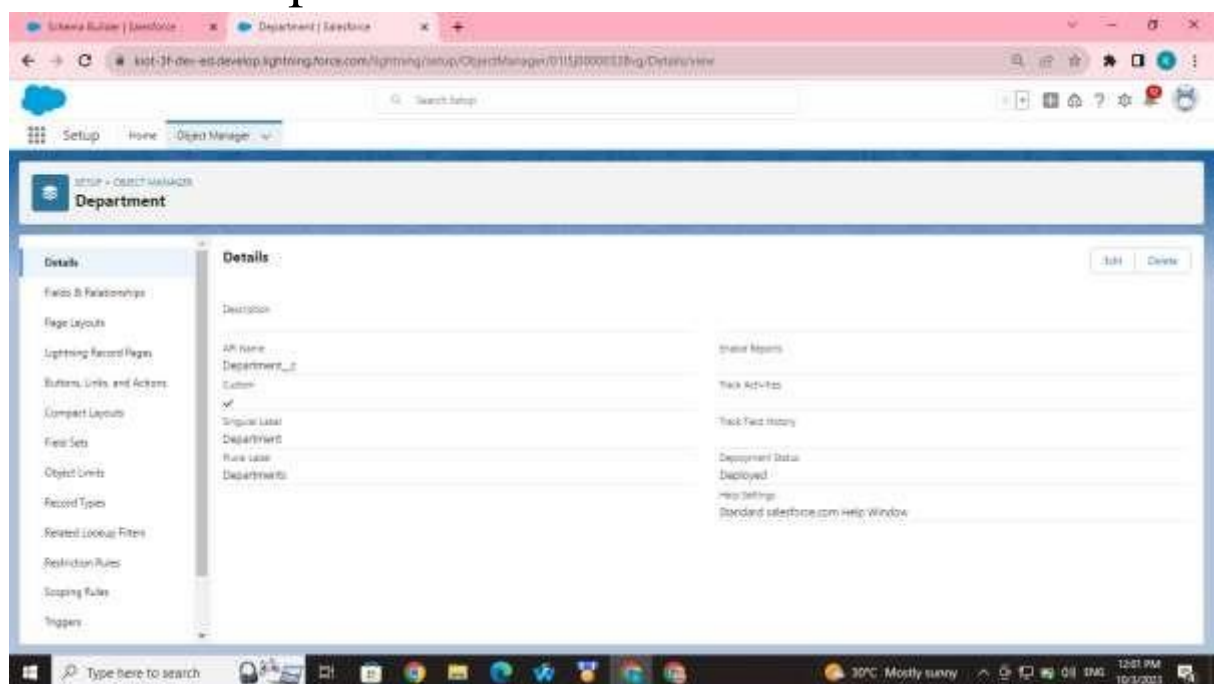

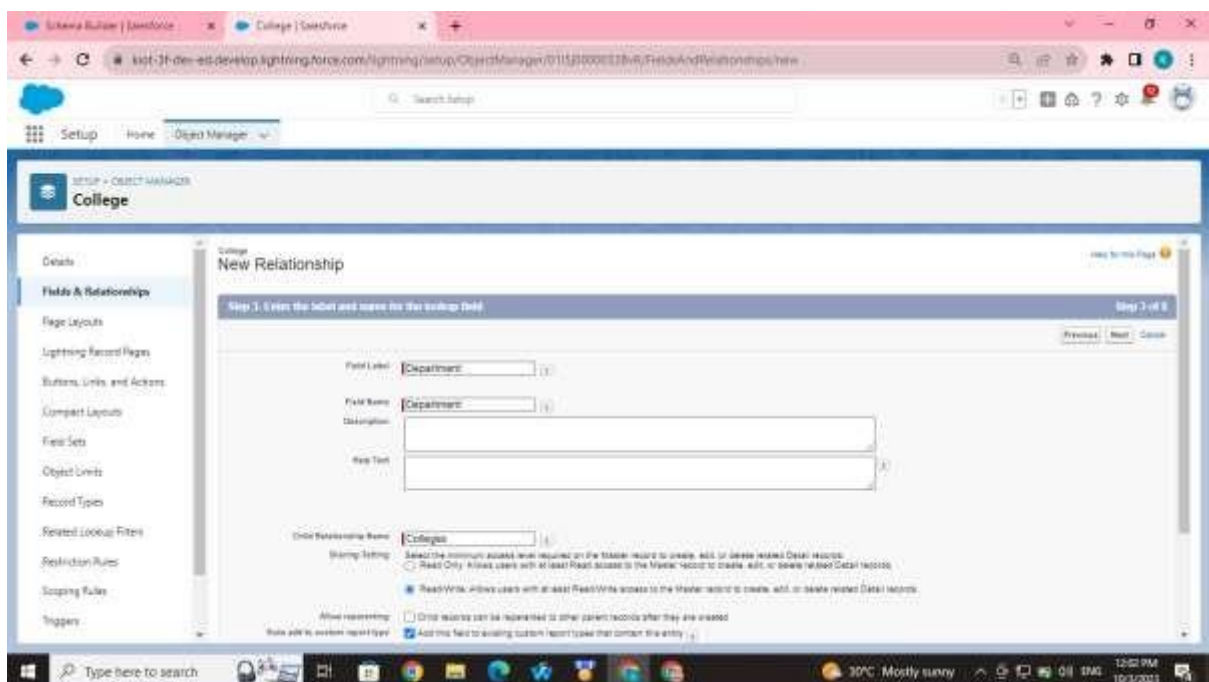

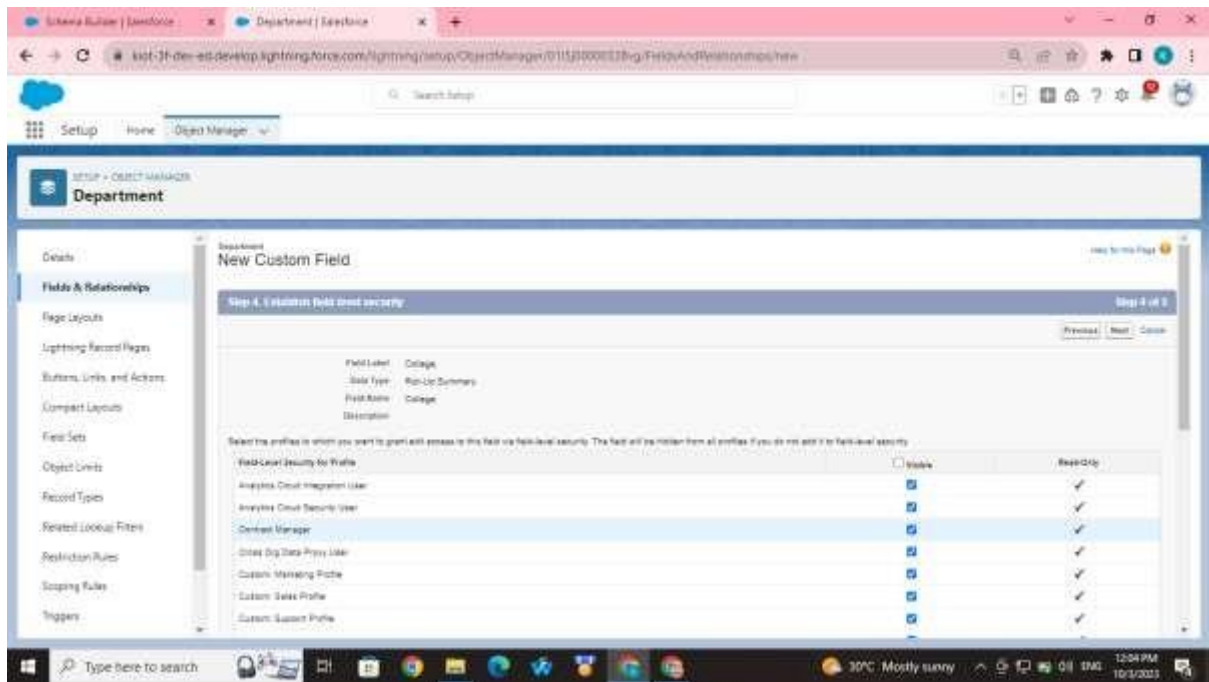

Step 2: Create a Master-Detail Relationship

To create a Master-Detail relationship between these two custom objects, follow these steps:

1. Go to Setup > Object Manager.
2. Click on "College" to open its settings.
3. In the left sidebar, click on "Fields & Relationships."
4. Click the "New" button to create a new custom field.

5. Choose "Master-Detail Relationship" as the data type.
6. Enter a label for the relationship, e.g., "Department."
7. Choose " Department " as the related object.
8. Configure other settings as needed and click "Next."
9. Specify the field-level security and add it to relevant page layouts.
10. Click "Next" and "Save" to create the relationship.

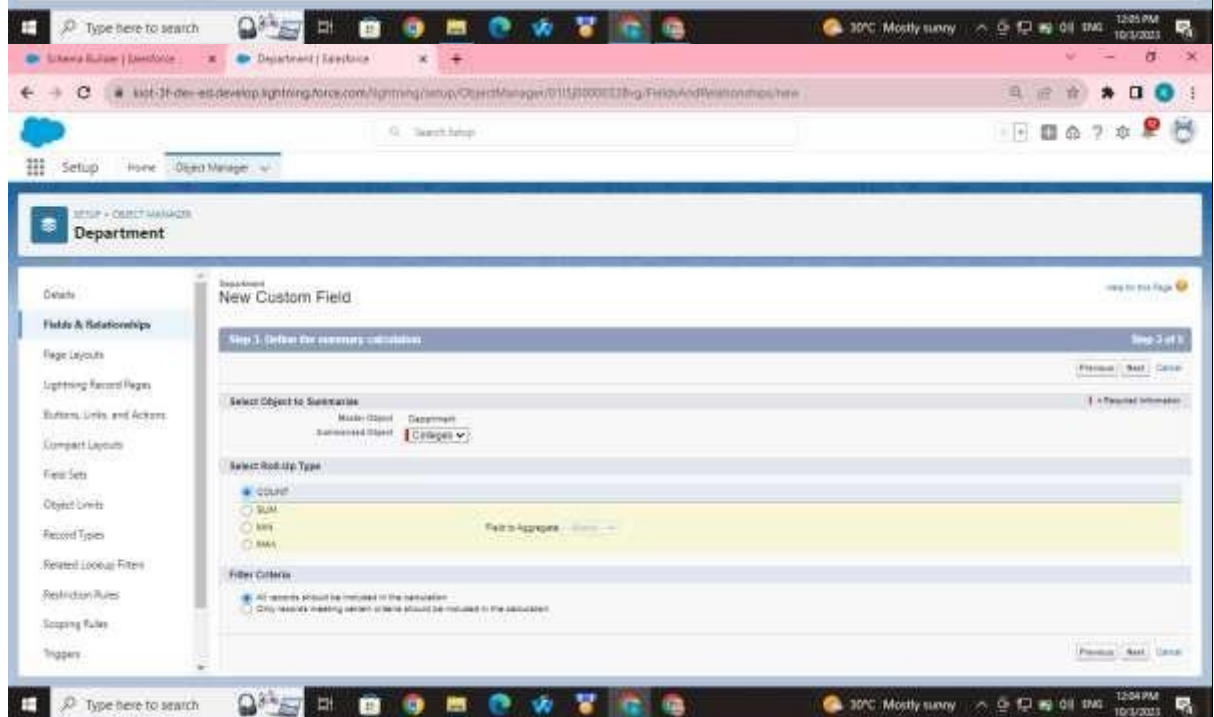

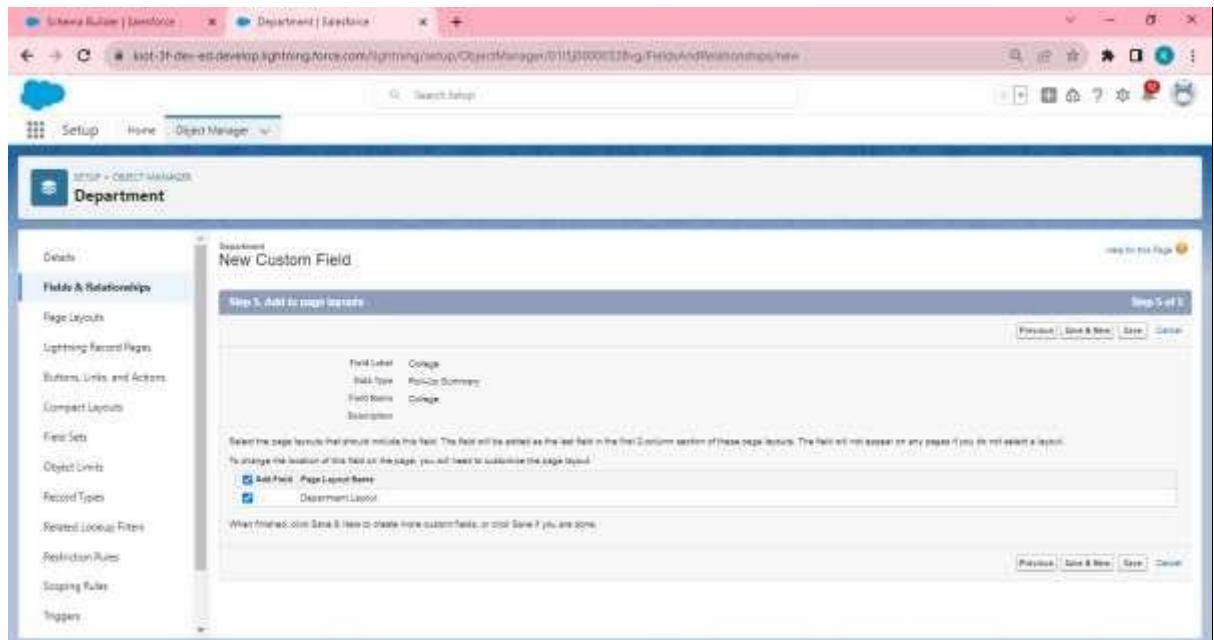

Step 3: Create the Roll-Up Summary Field

Now, let's create a Roll-Up Summary Field on the "College" to calculate the total number of related records in "Department":

1. Still on the "College" settings, go to "Fields

& Relationships."

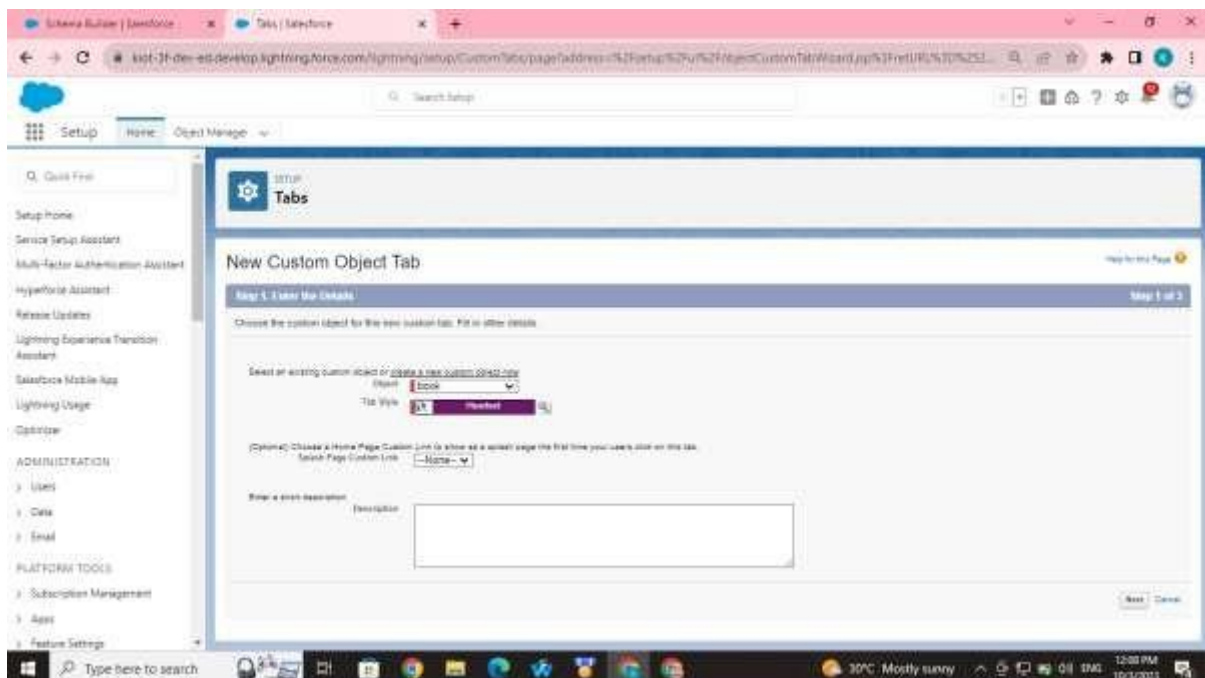

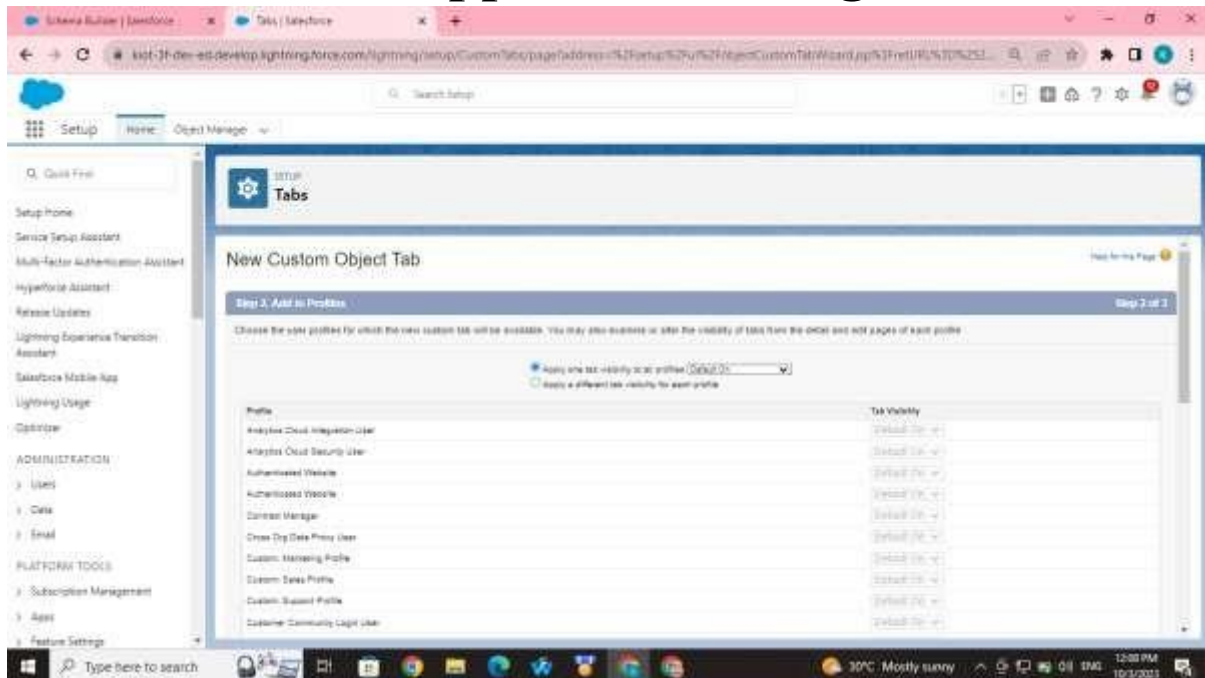

- 2. Click the "New" button to create a new custom field.**
- 3. Choose "Roll-Up Summary" as the data type.**
- 4. Enter a label for the field, e.g.,**
- 5. Choose "Count" as the Roll-Up Type.**
- 6. Select " Department" as the object to roll up information from.**
- 7. Specify the filter criteria if you want to filter the related records.**
- 8. Configure other settings as needed and click "Next."**
- 9. Specify the field-level security and add it to relevant page layouts.**
- 10. Click "Next" and "Save" to create the Roll-Up Summary Field.**

9. Review and Save the app.

10. Assign the app to users or profiles.

11. Test the app with the assigned users.

Setup | Home | Object Manager

Setup

Tabs

Step 3 of 3: Add to Custom Apps

Choose the custom apps for which the new custom tabs will be available. You may skip apps or alter the visibility of tabs from the detail and edit pages of each Custom App.

Custom App	Include Tab
Platform (standard__Platform)	<input checked="" type="checkbox"/>
Sales (standard__Sales)	<input checked="" type="checkbox"/>
Service (standard__Service)	<input checked="" type="checkbox"/>
Marketing (standard__Marketing)	<input checked="" type="checkbox"/>
Service Console (standard__ServiceConsole)	<input checked="" type="checkbox"/>
High Volume Customer Portal User	<input checked="" type="checkbox"/>
Authenticated Website User	<input checked="" type="checkbox"/>
App Launcher (standard__AppLauncher)	<input checked="" type="checkbox"/>
Community (standard__Community)	<input checked="" type="checkbox"/>
Site.com (standard__Site)	<input checked="" type="checkbox"/>
Realtime Chatbot (standard__Chatbot)	<input checked="" type="checkbox"/>
Content (standard__Content)	<input checked="" type="checkbox"/>
Analytics Studio (standard__Analytics)	<input checked="" type="checkbox"/>
Flow Console (standard__FlowConsole)	<input checked="" type="checkbox"/>

2. If there is 2 user, User A and User B in the organisation and we want in Account object that User A should not see the User B Record and user B should not see User A record then apply the Security for the users.

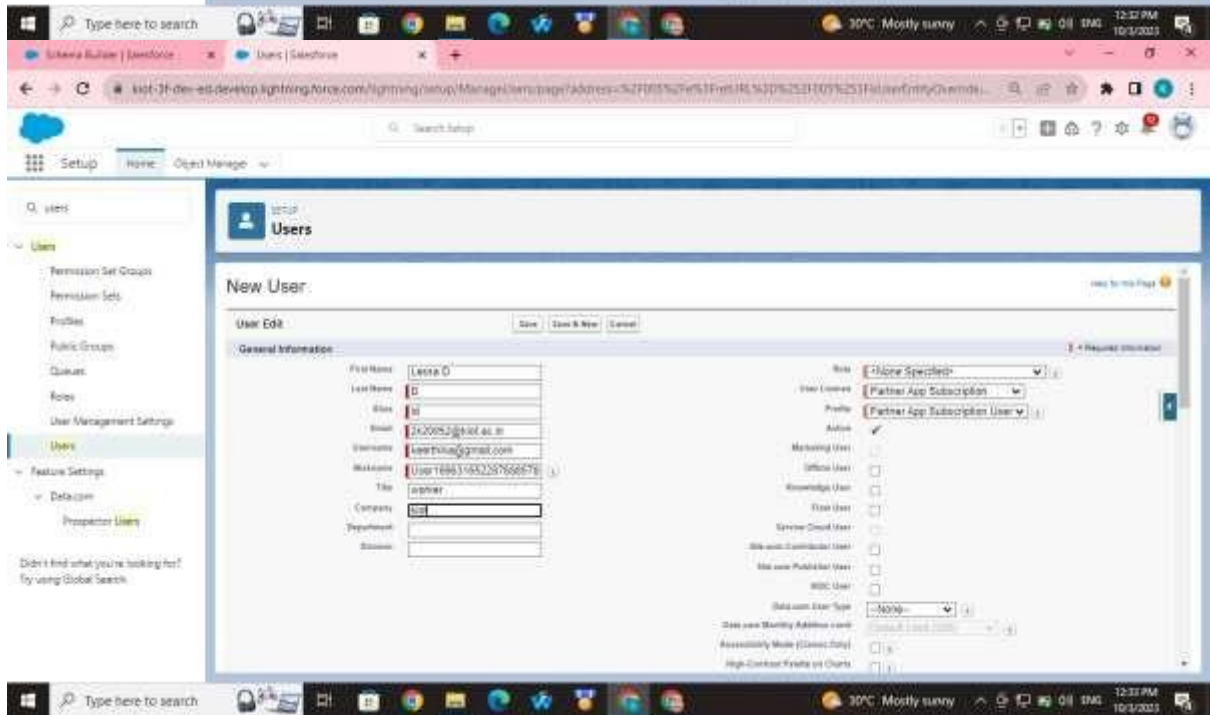

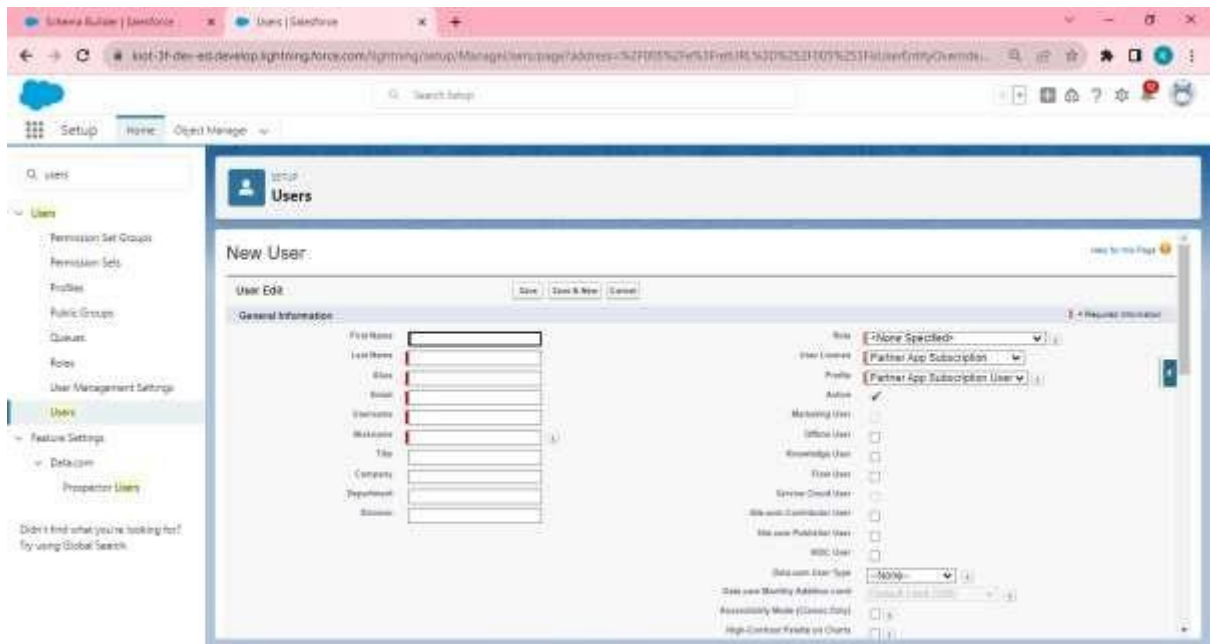

Solution:

Step 1: Create two separate custom profiles, one for Manager and one for sales manager.

The screenshot shows the Salesforce Lightning Setup interface for a user named Jaya A. The page is titled 'User Setup' and includes a search bar and navigation tabs for Setup, Home, and Object Manager. The user details section shows the user's name, email, username, and other information. The roles section shows the user's current role as 'Partner 450 Subscription' and a list of other roles. The permissions section shows the user's permissions for various objects and features.

Field	Value
Name	Jaya A
First Name	Jaya
Last Name	A
Username	jaya@salesforce.com
Role	Partner 450 Subscription
Time Zone	(GMT+05:30) India Standard Time (Asia/Kolkata)
Language	English (India)
Default App	Lightning
Default App	Lightning
Default App	Lightning

The screenshot shows a Gmail interface with a sidebar on the left containing navigation icons for Mail, Chat, Shared, and More. The main area displays an email from 'support@salesforce.com' to 'keerthi@kic.ac.in'. The email content features the Salesforce logo, a 'Welcome to Salesforce!' message, and instructions to verify the account via a button labeled 'Verify Account'. Below this, it provides a link to log in later: 'https://000c-3f-dev-ed.developer.my.salesforce.com'. The email footer includes the username 'keerthi@kic.ac.in' and a welcome message.

Step 2:

Permission Sets:

- Create two permission sets, one for manager and one for sales manager.

Object-Level Security:

- In each profile and permission set, set the objectlevel security for the Account object to "Read" to ensure that both I-manager and I- sales manager can view Account records.

Record-Level Security:

- Implement record-level security using CriteriaBased Sharing Rules.

- Create a sharing rule that shares Account records owned by manager with manager and records owned by sales manager with sales manager.
- For the sharing rule criteria, specify that records owned by manager are shared with user A, and records owned by sales manager are shared with sales manager. Ownership:
- Ensure that the Account records are owned by the respective users, with manager owning their records and sales manager owning their records.

Organization-Wide Defaults:

- Set the organization-wide defaults for the Account object to "Private" to ensure that records are private by default.

Testing:

- Test the setup by logging in as manager and sales manager separately to verify that they cannot access each other's records.

3. Suppose there are 2 Users and they are having Create, Read, Edit access on Account Object with the same profile but we want to open up the access for one user to delete how will you implement the Security setting.

Solution:

Step 1: we need create a profile for the two user which has the access to Create, Read, Edit for follow as per.

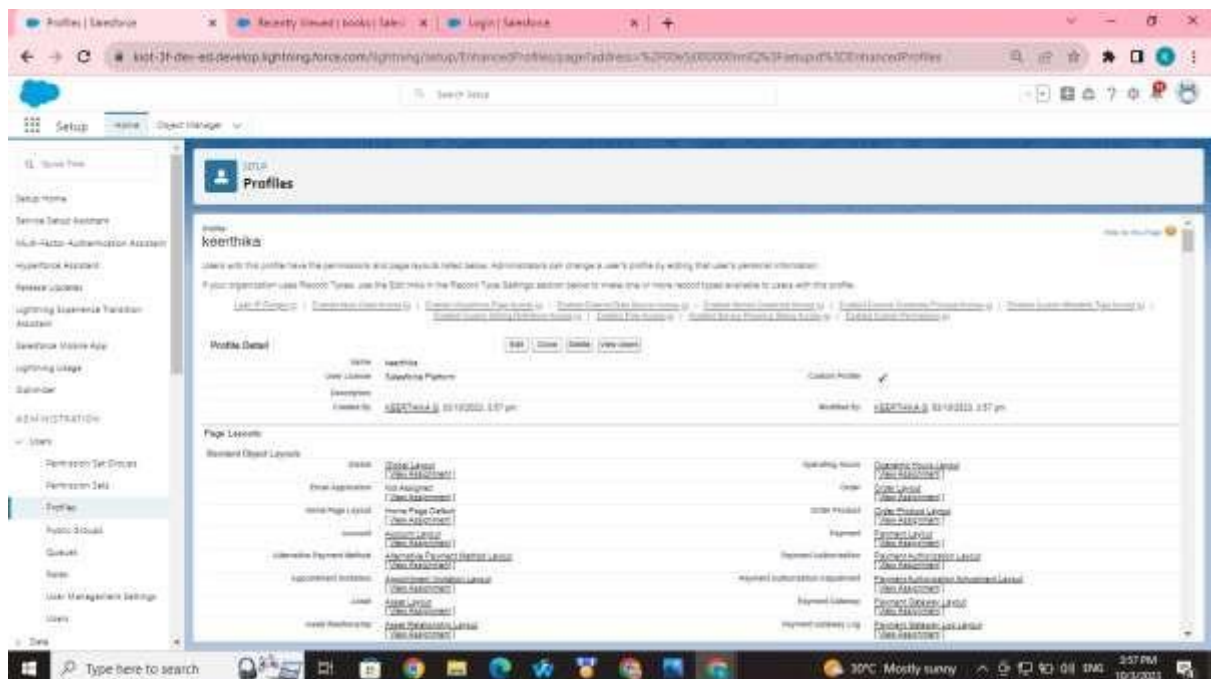

Setup-quick search[profile]

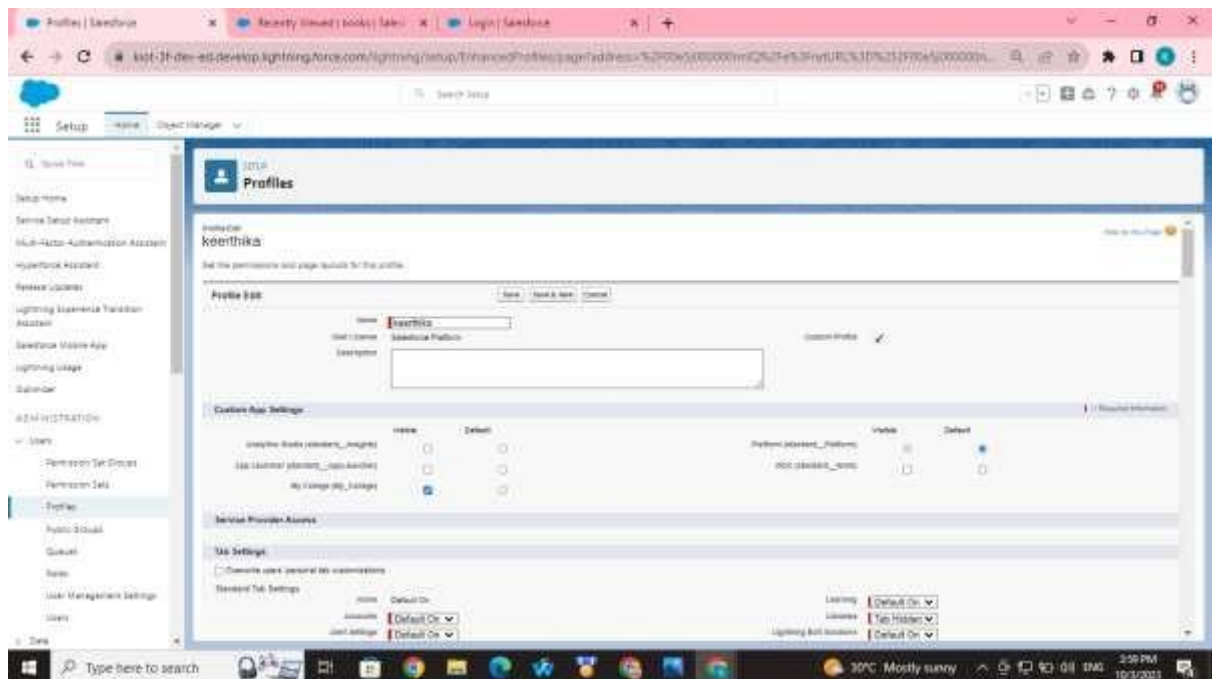

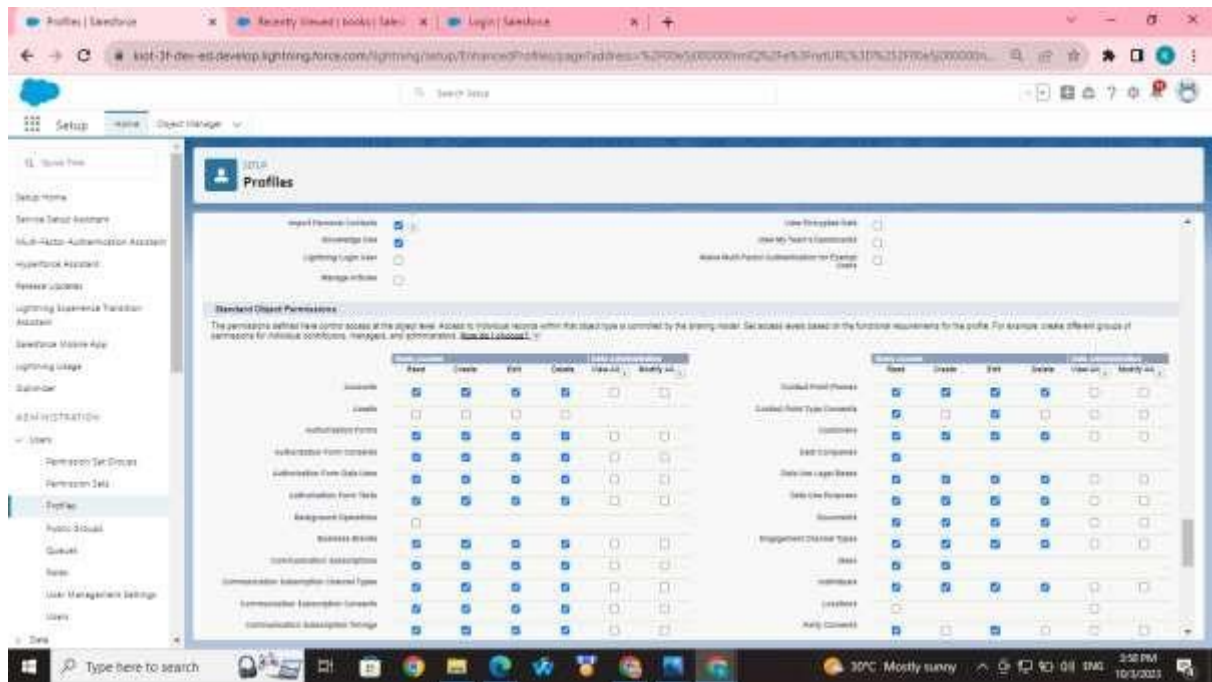

Here I had made it my profile name as Jaga and the existing profile as Standard Platform User.

Step 3:

Now click on the edit and scroll down to custom object settings and enable the read,create,edit and view options. After that click on save.

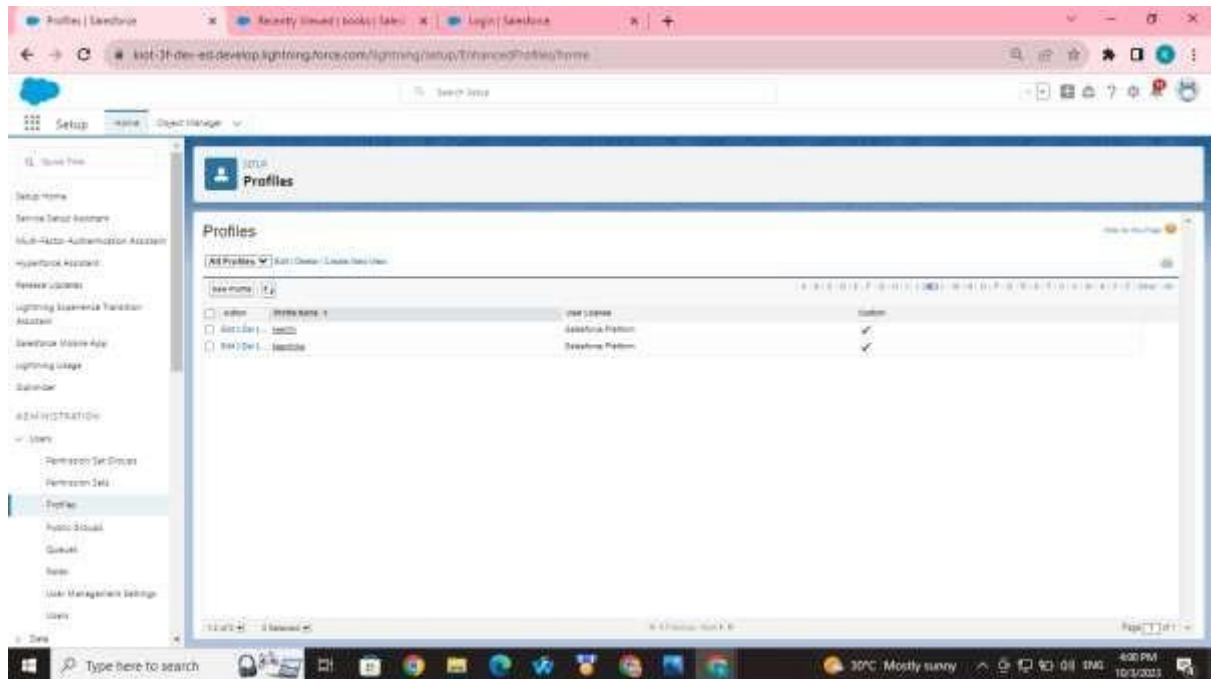

Step 4

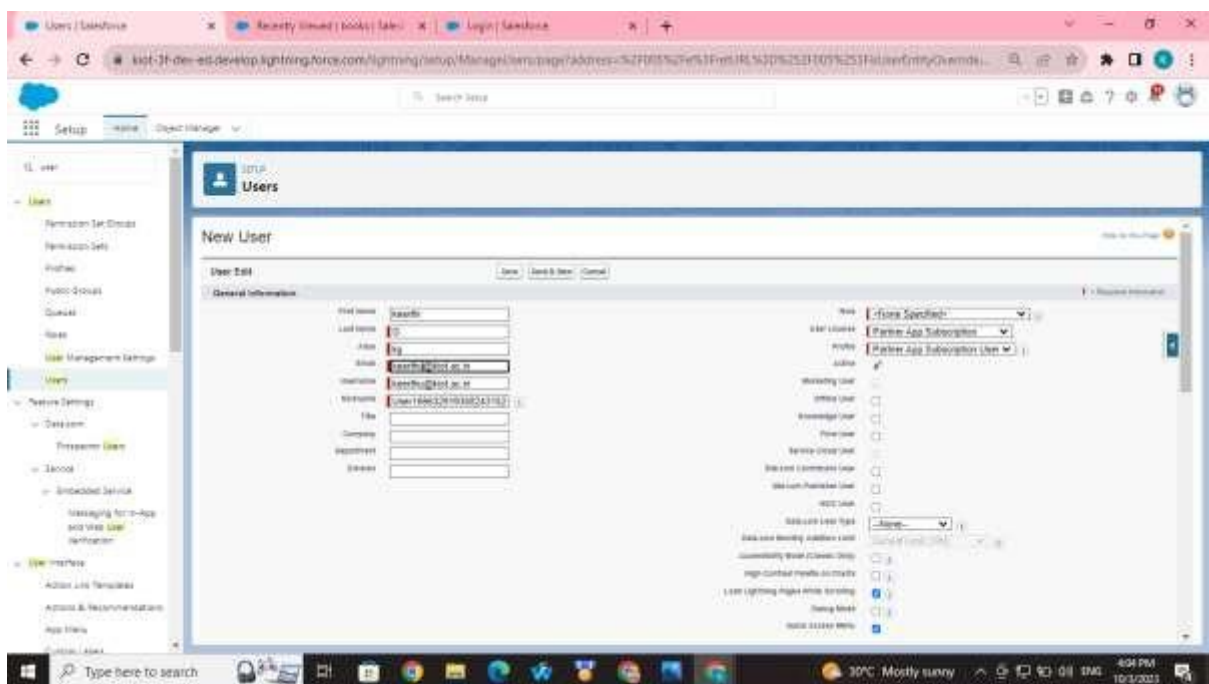

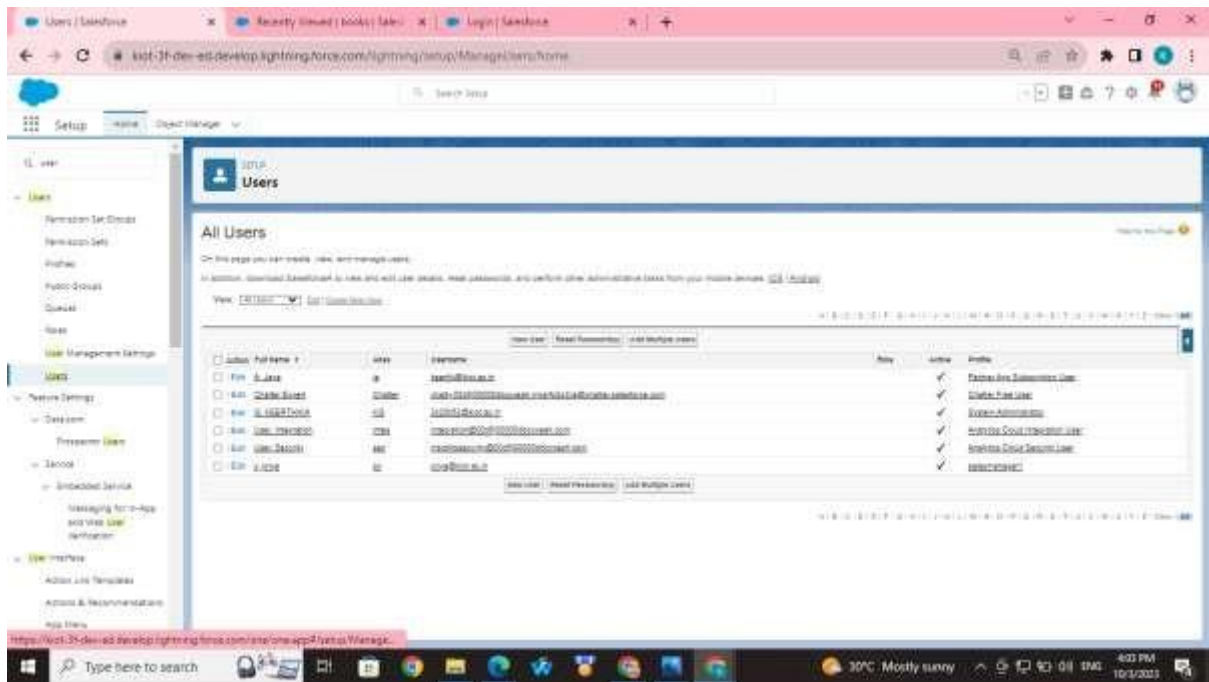

Now you can preview your created profile on the profile option here my profile name jaga has been

created with the access of read,create,edit along with view on it

Step 5:

Now create two users by enter into the Setup-quick search[user] and then click on new user after clicking that you need to create two user along with the profile as Jaga which we have created on the step 2.once the one user has been created click on the save&new so that you can create the second user and there the user name can be created with alternate name but with the same user profile and once the two user are create click on save.

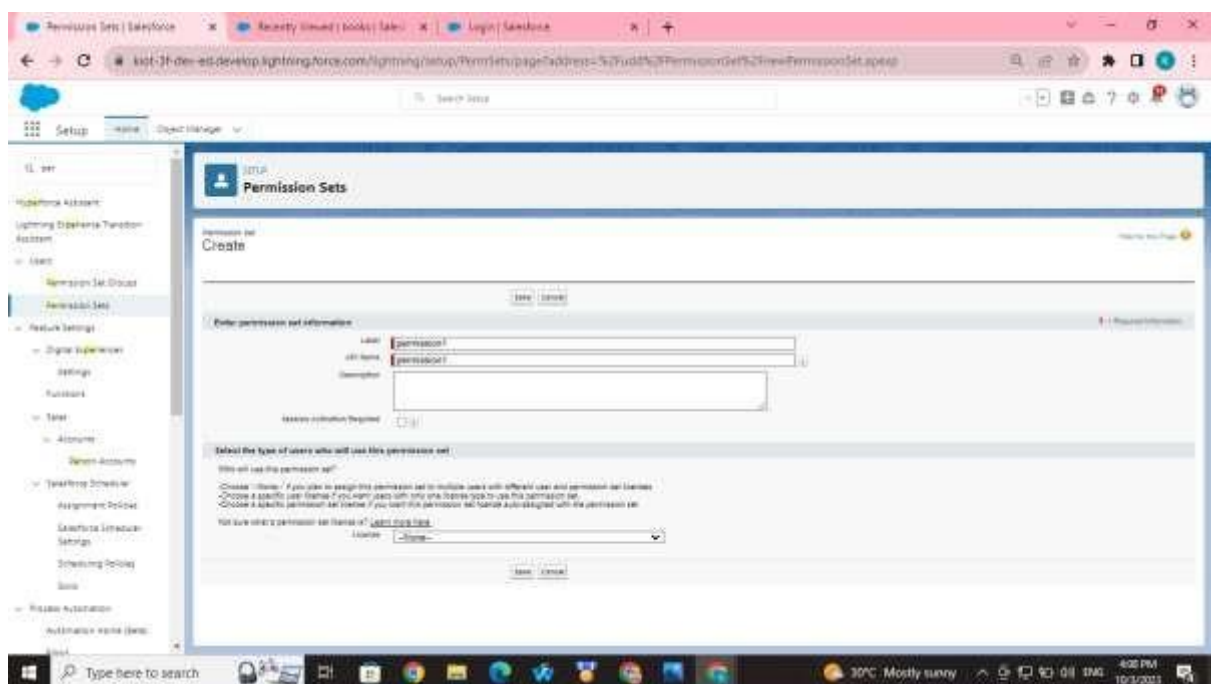

Now you can preview your two user that you have created in my side I had create the two users a Jagadeesh11 and Jagadeesh22 as a director channel sales with the marketing team.

Step 6:

Now the two user as been created with the profile so that two user can perform the Create, Read, Edit and view on both the user. So as per the given task we need to allocate a specific access as delete on one user for that we need create a permission set for one user so it can created as

setup-quick search[permission set]-new-fill label name [auto select the API name]-click on saveobject settings-accounts.

Field Permissions

Field name	Read access	Edit access
Account Name	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Account Number	<input type="checkbox"/>	<input type="checkbox"/>
Account Owner	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Account Site	<input type="checkbox"/>	<input type="checkbox"/>
Account Details	<input type="checkbox"/>	<input type="checkbox"/>
Name	<input type="checkbox"/>	<input type="checkbox"/>
Annual Revenue	<input type="checkbox"/>	<input type="checkbox"/>
Billing Address	<input type="checkbox"/>	<input type="checkbox"/>

Step 8

Now click on add assignment there you will find your two created users click on any one user to give a special access as delete on it and then click on assign so that the specific selected user can have a special access as delete on it.

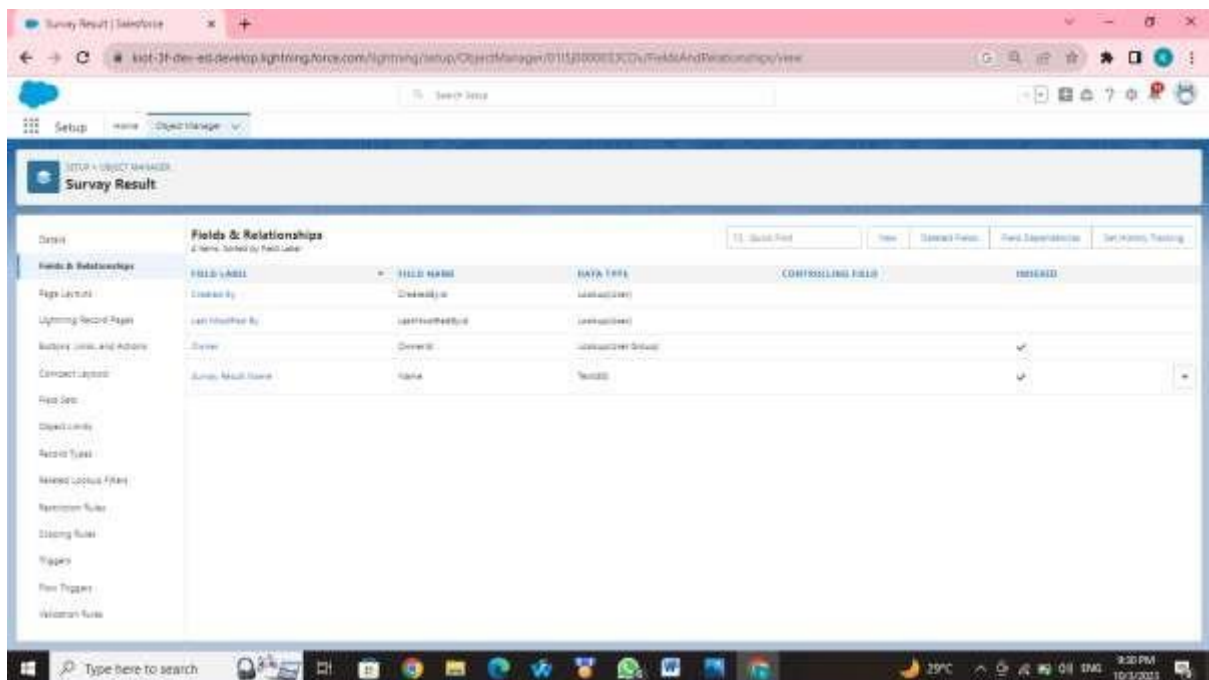

Now click on Assign.

Now the specific access for the Jagadesh11 user has been assigned successfully.

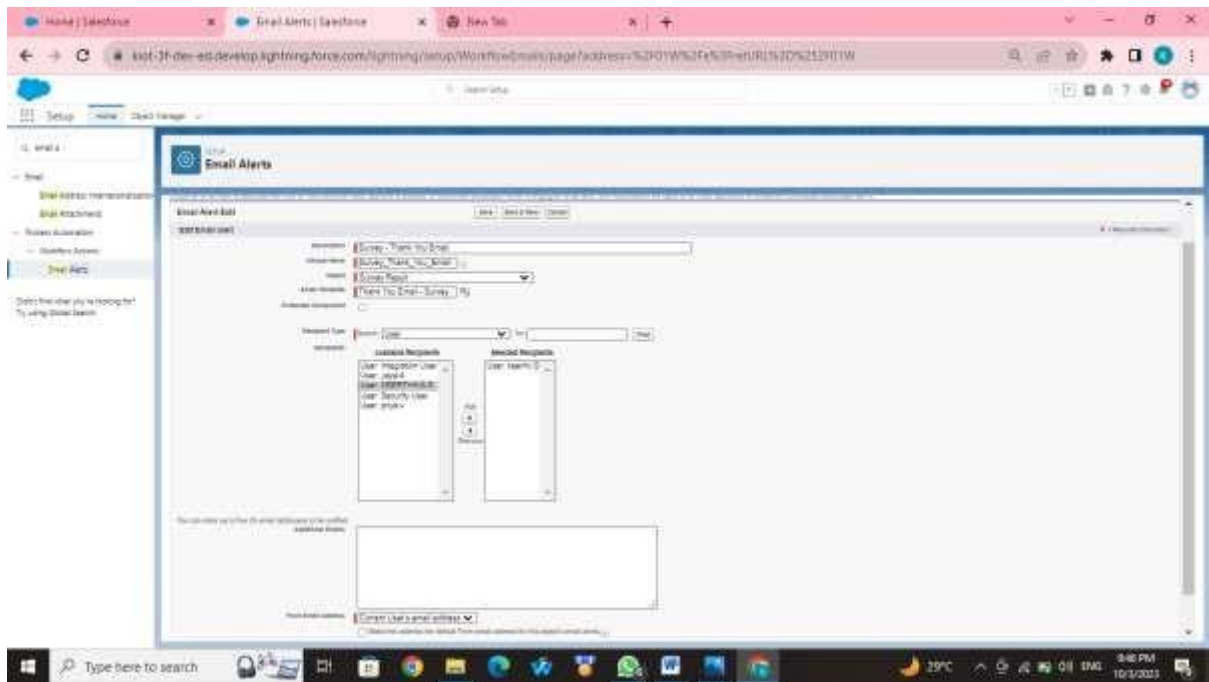

Step 2: Create a Thank You For Survey Lightning Email Template

1. Click **App Launcher**.
2. In the Quick Find box, type **Email Templates**.
3. Clicks on the **New Email template** button.
4. Name the **Lightning Email Template** and make sure to store it in the **Public Email Templates** folder.
5. Create a template like the following screenshot.

Step 3: Create an Email Alert

1. Click **Setup**.
2. In the Quick Find box, type **Email Alerts**.
3. Select **Email Alerts**, click on the **New Email Alert** button.
4. **Name** the **Email Alert** and click the Tab button. The **Unique Name** will populate.
5. For **Object** select **Survey Result**.
6. For the **Email Template** chooses **Lightning Email Template Thank You Email – Survey**.
7. For **Recipient Type** select **Email Field: Email**.
8. Click **Save**.

Step 4.1: Salesforce Flow — Create a Screen that Allow Users to Fill Survey

1. Click **Setup**.
2. In the Quick Find box, type **Flows**.
3. Select **Flows** then click on the **New Flow**.
4. Select the **Screen Flow** option and click on **Next** and configure the flow as follows:
 1. **How do you want to start building: Freeform**
5. We will use the **Screen** element to capture a **Survey response** form. Drag and drop a **Screen** element onto the canvas.

Step 4.2: Salesforce Flow — Add a Record

Creates Element to Save Survey Response

1. Drag-and-drop the **Create Records** element onto the Flow designer.
2. Enter a name in the **Label (Save Response)** field; the **API Name** will autopopulate.
3. For **How Many Records to Create** – select **One**.
4. For **How to Set the Record Fields** – select **Use separate resources, and literal values**.
5. Select the **Survey Result** object from the dropdown list.
6. **Set Field Values for the Survey Result**
 1. Row 1:
 1. **Field: Comment__c**
 2. **Value: {!Comment}** 2. Click **Add Row**
 3. Row 2:
 1. **Field: Email__c**
 2. **Value: {!Email.value}** 4. Click **Add Row**
 5. Row 3:
 1. **Field: Name__c**
 2. **Value: {!Name.firstName}**

{!Name.lastName}

6. Click **Add Row**

7. Row 3:

1. **Field:**

Rating__c

2. **Value:**

{!Rating} 7. Click **Done**.

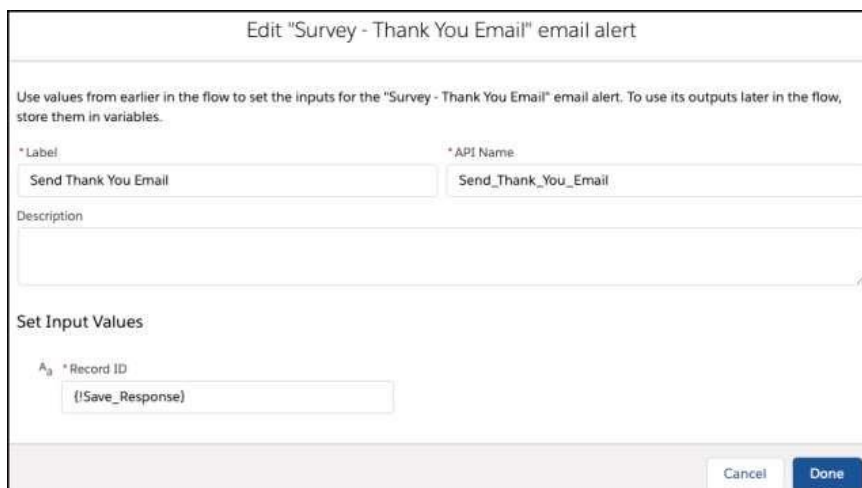

The screenshot shows the 'Edit Create Records' interface in Salesforce. The title bar says 'Edit Create Records'. Below it, a section 'Create Salesforce records using values from the flow.' contains two input fields: '* Label' with the value 'Save Response' and '* API Name' with the value 'Save_Response'. A 'Description' text area is empty. Below this, 'How Many Records to Create' has 'One' selected. 'How to Set the Record Fields' has 'Use separate resources, and literal values' selected. The 'Create a Record of This Object' section shows '* Object' as 'Survey Result'. The 'Set Field Values for the Survey Result' section lists four fields with their corresponding values: 'Comment__c' with 'A3 Comment', 'Email__c' with 'A3 Email > Value', 'Name__c' with '{!Name.firstName} {!Name.lastName}', and 'Rating__c' with 'A3 Rating'. Each field has a trash icon to its right. At the bottom, there is a '+ Add Field' button, a checkbox for 'Manually assign variables' (which is unchecked), and 'Cancel' and 'Done' buttons.

Step 4.3: Salesforce Flow — Call an Action — Email Alert to Send Out Thank You Email

The next step is to call the **Survey – Thank You Email** email alert from flow so that when flow

fires it triggers the thank you email to survey participants.

1. Under **Toolbox**, select **Element**.
2. Drag-and-drop **Action** element onto the Flow designer.
3. In the **Action** box, type **Survey – Thank You Email**.
4. Clicks on the **Survey – Thank You Email** email alert.
5. Click **Done**.

The screenshot shows a configuration window titled "Edit 'Survey - Thank You Email' email alert". It contains a text box for the label, a text box for the API name, a description text area, and a section for setting input values. The label is "Send Thank You Email", the API name is "Send_Thank_You_Email", and the input value is "(!Save_Response)".

Use values from earlier in the flow to set the inputs for the "Survey - Thank You Email" email alert. To use its outputs later in the flow, store them in variables.

* Label: Send Thank You Email

* API Name: Send_Thank_You_Email

Description:

Set Input Values:

* Record ID: (!Save_Response)

Cancel Done

In the end, Sergio's **Flow** will look like the following screenshot:

1. Click **Save**.
2. Enter **Flow Label** the **API Name** will autopopulate.
3. Click **Show Advanced**.
4. **How to Run the Flow: User or System**

Context—Depends on How Flow is Launched

5. **Type: Screen Flow**
6. **API Version for Running the Flow: 51**
7. **Interview Label: Survey**

Step 5: Create a Lightning Application to Render Lightning Runtime for Flow in a Visualforce Page

Now we will create a Lightning Application that declares a dependency on the **lightning:flow** component.

1. Click Setup | Developer Console

2. Navigate to **File | New | Lightning Application**
3. Enter a **Name (VFPageToLC)** field, make sure to select the **Lightning Out Dependency App** checkbox.
4. Click **Submit**.
5. Copy code from **GitHub** and paste it into your Lightning Application.
6. **Save** your code.

A screenshot of an IDE window titled 'VFPPageToLC.app'. The code editor shows the following XML code:

```
1 <aura:application access="global"
2     extends="ltng:outApp"
3     implements="ltng:allowGuestAccess">
4     <aura:dependency resource="lightning:flow"/>
5 </aura:application>
```

The IDE has a menu bar with 'File', 'Edit', 'Debug', 'Test', 'Workspace', and 'Help'. At the bottom, there is a blue bar labeled 'Logs, Tests, and Problems'.

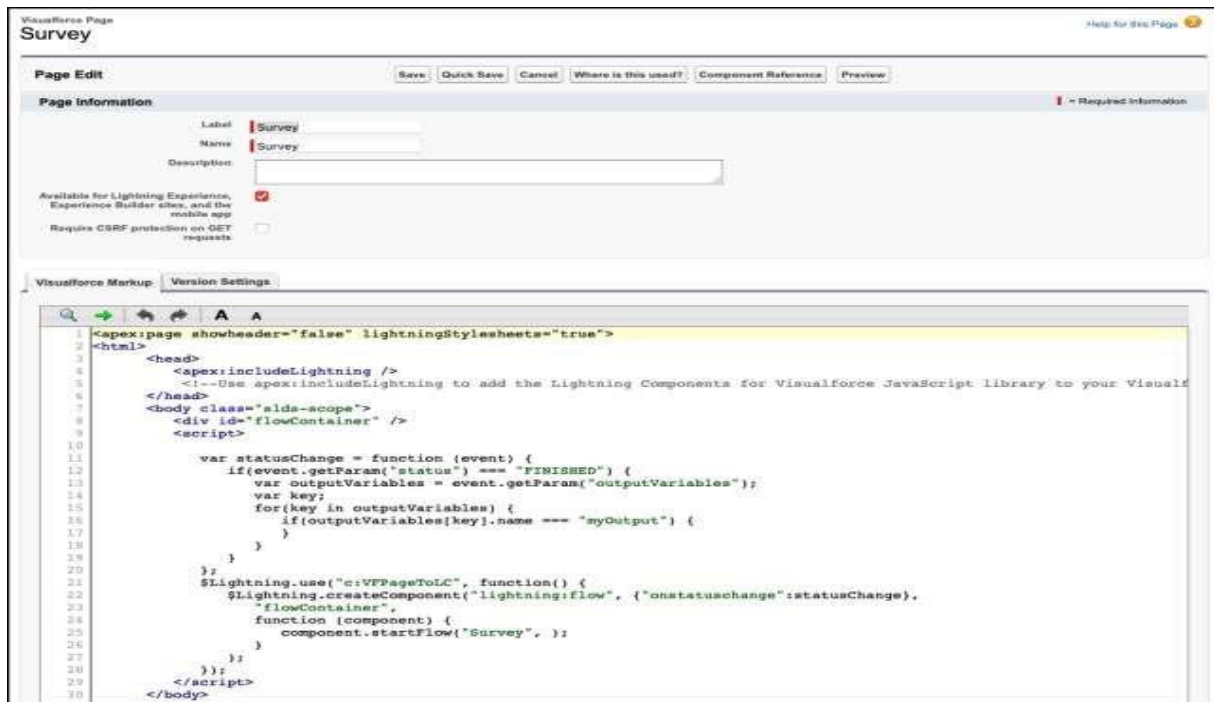

Step 6: Create a Visualforce Page and Embed

Your Flow Into It

Now we will create a Lightning Application that declares a dependency on the **lightning:flow** component.

Add the Lightning Components for Visualforce JavaScript library to your Visualforce page using the **<apex:includeLightning/>** component. In the Visualforce page, reference the dependency app. Then write a JavaScript function that creates the component on the page using **\$Lightning.createComponent()**

1. Click **Setup**.
2. In the Quick Find box, type **Visualforce Pages**.
3. Clicks on the **New** button.
4. Copy code from **GitHub** and paste it into your visualforce page
5. Click **Save**.

Step 7: Create a Force.com Site to Open Your Flow for Unauthenticated Access

Now we will create a site to open the flow for unauthenticated access.

1. Click **Setup**.
2. In the Quick Find box, type **Sites**.
3. Clicks on the **New** button.
4. Fill the details as per the screenshot below:
5. Click **Save**.

8:09 PM (1 minute ago)   

to me

Hi Alok Sinfal,

Thanks for taking time out to participate in our survey. We are very appreciative of the time you have taken to assist in our analysis, and commit to utilizing the information gained to contemplate and implement worthwhile improvements. We will share these results with you through your State Survey Agency, whom we also thank for their generous participation.

Once again, we are extremely grateful for your contributing your valuable time, your honest information, and your thoughtful suggestions.

Thanks,
Automation Champion
